Toledo Bend Reservoir, LA & TX

Purpose: The Toledo Bend Reservoir is experiencing several problems which are limiting the value of its aquatic and terrestrial habitat. These problems include a lack of aquatic vegetation and infestation of non-native aquatic and emergent wetland species. In addition, shoreline erosion in some areas is lowering water quality and causing a loss of terrestrial shoreline habitat. A feasibility study will be conducted to assess these problems and develop possible solutions.

Sponsor: The Sabine River Authorities of both Louisiana and Texas
