

Olmos Creek, San Antonio, Texas

Purpose: The study focuses on the Olmos Creek Basin Reservoir, which was originally created for flood control. Over time the reservoir has attracted a variety of recreational facilities including a city park, skeet range, golf course, baseball fields and other recreational amenities, which have degraded the value of the habitat within the study area. Implementation of the recommended plan would restore approximately 73 acres of bottomland hardwoods, 17 acres of native prairie, and 6 acres of in-stream aquatic habitat.

Sponsor: City of San Antonio, TX
