

Steinhagen Lake, Neches River, Texas

Purpose: A recent hydrographic survey indicates that B.A. Steinhagen has lost some 40,000 acre feet of capacity (approximately 34%) due to sedimentation since deliberate impoundment of the lake began in 1951. The study will assess the feasibility of removing sediment from the lake and to identify beneficial uses of the sediment if applicable.

Sponsor: Lower Neches Valley Authority.

Congressional District: Brady TX-8
